PROFESSIONAL SUMMARY

AI/ML Engineer with expertise in Python, PyTorch, Deep Learning, NLP, and Generative AI. Passionate about building end-to-end AI applications and scalable ML solutions.

EDUCATION

B.Tech – Computer Science & Engineering (AI & ML) Graduating 2027
Quantum University, Roorkee 8.3 CGPA

Diploma – Mechanical Engineering Graduating 2024
Uttarakhand Institute of Technical & Professional Education 84%

TECHNICAL SKILLS

AI / ML: PyTorch, scikit-learn, NEAT, Transformers, LSTMs, CNNs, ViT, Autoencoders, OpenCV, TensorFlow

Programming Languages: Python, C++, C, JavaScript, Java, HTML, CSS, R, SQL

Data Science & Visualization: Pandas, NumPy, Seaborn, Matplotlib, Plotly

Backend & APIs: Node.js, Express.js, FastAPI, REST APIs, Streamlit, Docker, MongoDB

Frontend: React.js, HTML5, CSS3

Tools & Version Control: Git, GitHub, UV, Docker, VS Code, API Development

WORK EXPERIENCE

1M1B, Virtual | AI for Sustainability Virtual Intern May 2026 – June 2026

- Explored AI and Generative AI tools for sustainability through real-world case studies and hands-on learning.

SAMatrix, samatrix.io | AI / ML Intern June 2025 – July 2025

- Applied statistical ML methods to predict customer behavior; handled feature engineering, model evaluation, and result interpretation on real-world datasets.

Bajaj Auto Limited, | Junior Engineering July 2023 – July 2024

- Contributed to engineering projects and technical problem-solving in a leading automotive manufacturing company.

PROJECTS

Local RAG (Retrieval-Augmented Generation) System [\[GitHub\]](#)

FastAPI | LangChain | ChromaDB | Ollama | Hugging Face | Python

- Developed an offline Retrieval-Augmented Generation (RAG) system using LangChain, ChromaDB, and local LLMs.

Movie Recommendation System [\[GitHub\]](#)

FastAPI | React.js | scikit-learn | MongoDB | Python

- Full-stack engine combining content-based filtering (TF-IDF, cosine similarity) and collaborative filtering; FastAPI backend with React (Vite) frontend for search, details, and preference tracking.

Traffic Lane Detection System [\[GitHub\]](#)

OpenCV | Python | Computer Vision | NumPy

- Developed a real-time traffic lane detection system using OpenCV and computer vision techniques.

KEY ACHIEVEMENTS

- Built 3 end-to-end AI/ML projects spanning deep learning, NLP, and full-stack development with production-ready deployment
- Maintained 8.3 CGPA in B.Tech AI/ML program while developing industry-grade applications and gaining practical experience
- Hands-on expertise with advanced neural network architectures including LSTMs, Transformers, CNNs, and custom attention mechanisms
